

RWA INTELLIGENCE / SOLANA

Real assets. Clearer vision.

The token behind the asset, brought into focus.

[Explore the live product ↗](#)

INSPECT · DISCOVER · MAINNET

01 / THE PROBLEM

A balance is only the beginning.

A token amount leaves operational questions unanswered.

01

What am I holding?

Mint, program, metadata and issuer attribution.

02

What does it mean?

Raw units, decimals and display conversion.

03

What can change?

Authorities, account states and transfer controls.

02 / WHO IT SERVES

Built for the people behind the product.

One inspection language across operational teams.

WALLETS

Explain the balance

Make token behavior understandable in a wallet workflow.

ISSUERS

Expose the controls

Give integrators a clear view of observable configuration.

TREASURIES

Carry the evidence

Inspect public accounts and export a dated record.

03 / THE WORKFLOW

From address to understanding.

Start with a public mint. Leave with a portable record.

01

Inspect

Mint + optional public owner

Guest access · No wallet required · No asset movement

02

Understand

Identity + amounts + controls

03

Export

JSON + CSV evidence

04 / THE LIVE DEMO

Follow USDY on mainnet.

A real Solana mint, from the issuer's address registry.

ASSET

Ondo USDY

Treasury-linked note

Open the guided demo → /demo

PROGRAM

SPL Token

Legacy token program

NETWORK

Mainnet

Public chain observation

05 / SOLANA ACCOUNTING

Exact underneath. Clear on the surface.

Separate the accounting quantity from its display.

ACCOUNTING

Raw units

Integer strings + BigInt

Display conversion never feeds back into raw accounting.

DECIMALS

Standard amount

Exact decimal formatting

TOKEN-2022

Display amount

Official Scaled UI helper

06 / OBSERVABLE CONTROLS

See the controls. Keep the unknowns.

Known blocks and unresolved checks stay visible together.

AUTHORITIES

Who has control?

Mint, freeze, delegate and extension authorities.

TOKEN BEHAVIOR

What is configured?

Fees, hooks, pause state and account restrictions.

BOUNDARIES

What is unresolved?

Hook execution, recipient eligibility and private amounts.

07 / THE ARCHITECTURE

Every conclusion has a path back.

Bounded reads. Official decoders. Inspectable provenance.

INPUT**Validated API**

Server-only network configuration

Reads have separate context slots; they are not an atomic snapshot.

READ + DECODE**Solana state**

Mint · Clock · owner accounts

OUTPUT**Evidence record**

Typed result · context slots · export

08 / WHY RWA LENS

Know the token. See the market.

From token evidence to liquidity discovery.

DISCOVER

Find liquidity

Filter tokenized-asset pools by issuer, pair and liquidity.

TRACE

Follow the source

Inspect the exact mint. Open issuer reserve reports.

TAKE IT WITH YOU

Keep it close

Install the PWA. Carry JSON and CSV receipts.

09 / COMMERCIAL DIRECTION

Start with clarity. Build into workflows.

Planned model, to validate with design partners.

ENTRY

Public inspection

Keep the core research and export workflow accessible.

TEAM VALUE

Operational workflow

Explore shared review, retained evidence and monitoring.

INTEGRATION

Embedded intelligence

Validate API and wallet integration demand.

10 / DELIVERY ROADMAP

A useful product now. A deliberate next step.

Expand only where partner workflows justify it.

AVAILABLE

Inspect + discover

Mainnet reads, pool discovery, receipts and installable PWA.

NEXT

Partner pilots

Validate real review and integration workflows.

PLANNED

Team capabilities

Prioritize monitoring, retained history and integrations.

11 / THE INVITATION

Bring one workflow. Let's make it clearer.

Seeking wallet, issuer and treasury design partners.

CHOOSE

A real task

Select a token investigation or reconciliation workflow.

EVALUATE

The useful evidence

Identify which explanations your team needs to act.

SHAPE

The next integration

Define success and prioritize the smallest valuable pilot.

RWA LENS / ON SOLANA

Look closer.

Real assets. Clearer vision.
